Switch on...

HUSQVARNA AUTOMOWER™

HUSQVARNA AUTOMOWER™

We believe that there is more to life than mowing the lawn. That's why we have created the world's first fully automatic lawn mower. The minute you switch it on, you are free to switch off, knowing that Husqvarna Automower is busy giving you a superior lawn.

switch off.

Don't mow the lawn

A beautiful lawn. Three razor like blades cut the grass cleanly rather than tearing it off. The fact that Automower cuts more often produces shorter clippings, which produces better fertiliser. An irregular cutting pattern and wheels that offer outstanding grip also ensure you get the lawn surface you've always wanted even in complex or undulating gardens.

User freedom. Automower is equipped with a range of handy functions that combine optimal performance with user freedom. Programming is as easy as personalising a mobile phone and when this is complete, Automower carries out its work quietly, safely and effectively and charges itself when required, even when you're not at home.

Simple set up. The working area is defined with the help of a low voltage boundary wire, which is easily laid out around the desired cutting area. Flowerbeds and other areas to be avoided are protected using the same wire. An optional guide wire can be used to fine-tune your cutting programme for optimal efficiency. This way, Automower cuts evenly and safely up to borders, finds its way back to the charging station and avoids obstacles with ease.

Low energy consumption. Efficient energy management means low energy consumption, allowing Automower to operate at a fraction of the cost of conventional lawnmowers.

A greener, quieter alternative. Because it is electrically powered, Automower produces no harmful exhaust emissions. It is also extremely quiet and works discreetly exactly when you want it to. This means your quiet afternoon in the garden will never be disturbed again.

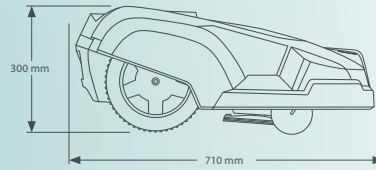

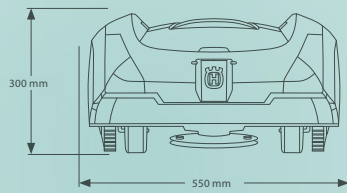

Safety first. If Automower is lifted off the ground or tips over, the cutting blade automatically shuts off. In addition, the cutting blades are placed far from the edge of the machine so if Automower meets an obstacle it will stop and redirect itself without causing any damage.

enjoy a performance.

Three models, one job

From the simplest of lawns to complex, undulating gardens, Automower delivers superb performance, outstanding results and because it is such an intelligent product, new levels of user freedom.

HUSQVARNA AUTOMOWER™ 230 ACX

Exclusive design and features meet high performance. The 230 ACX has a cutting capacity up to 3000 m², fast automatic charging, backlit keypad, and an anti-theft alarm. Dual guide wires make light work of complex lawn areas while extra wheel traction increases performance on sloping lawns. The result is a lawn surface of outstanding quality.

HUSQVARNA AUTOMOWER™ 220 AC

The 220 AC's 1800 m² cutting capacity offers an efficient alternative for demanding homeowners seeking extra freedom. Charging is automatic and installation and programming are facilitated using an easily navigated keypad. Smart design ensures your lawn is always in beautiful condition while an anti-theft alarm and unique PIN code offer maximum security.

HUSQVARNA AUTOMOWER™ 210 C

For lawn areas up to 500 m², the 210 C delivers practical, simple operation combined with outstanding results and increased freedom. Simply plug in the charging cord and let the mower charge over night, then the next day, the 210 C delivers several hours of cutting before it requires recharging. An efficient, desirable choice for homeowners with smaller or fragmented lawn areas.

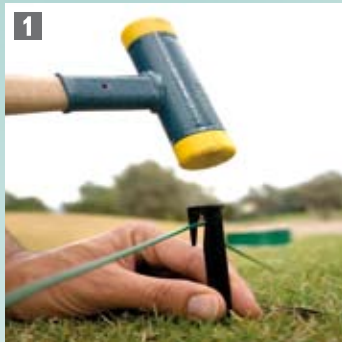

successfully delegated.

For a quality cut

Automower is designed to operate with the absolute minimum human interaction. Smart programming and functionality also allow it to tackle any situation that might arise in the course of its cutting programme.

Lawn care has entered a new age. Noise, exhaust fumes and refuelling have been consigned to history. Lawn mowing as you know it has ceased to exist. Discover Automower and join the quiet revolution.

1 - Easy installation. Simply lay out the boundary wire, secure with the staples supplied and the working area is defined.

2 - Automatic shut-off. If Automower is lifted up, it automatically shuts off power to the cutting blade, increasing user safety.

3 - Avoids obstacles. A low voltage boundary wire means that obstacles and other hazards are skilfully avoided.

4 - Night or day, rain or shine. Unlike many lawn mower users, Automower doesn't use the fact that it is raining to avoid cutting the lawn.

5 - Gradients no problem. Hilly gardens with gradients up to 35 percent are no problem thanks to super grip and high motor power.

6 - Information panel. Can be personalised to fit many different gardens and preferences. Automower is equipped with an anti-theft alarm and a unique PIN-code.

ACCESSORIES

All designed to make the job of mowing the lawn even easier. Available at your local Husqvarna Automower dealer.

Wall hanger

Soft carrying bag

Cover housing

Charger

Generator

leave it to an expert.

We use energy from the sun,

Husqvarna Automower Solar Hybrid is the world's first fully robotic lawn mower that is partly powered by the sun. Brilliant for your lawn, great for your conscience, better for the planet.

The product uses considerably less energy than any conventional mower. That's because in addition to a charging station, it comes with a large integrated solar panel. When there is daylight available, the solar cells enable the mower to extend its cutting periods before it needs recharging. That means a cut lawn in a shorter time, even lower power consumption and an extended battery life. So now it takes even less energy to mow the lawn.

HUSQVARNA AUTOMOWER™ SOLAR HYBRID			
Recommended working area	0 - 2100 m ² + / - 20%	Cutting width / height, cm	22 / 2 - 6
Area capacity per hour	75 - 110 m ² depending on light conditions	Noise level, dB(A)	69
